(54) Title: A METHOD OF RAPID SOFTWARE APPLICATION DEVELOPMENT FOR A WIRELESS MOBILE DEVICE

(57) Abstract: A method of rapid software application development for a wireless mobile device, comprising the step of calling modular software elements, that each (i) encapsulate functionality required by the wireless mobile device and (ii) share a standard interface structure and (iii) execute on the device, under the control of a command line interface. Because the elements execute under the control of a command line interface (and hence are command line programs) it is far easier for a programmer to explore the functioning of the elements - in particular how an element responds to a given input.
